

## Did You Know?

Did you know that you can change the label for any field in UNIVERS? Make your counter system more user-friendly or just make it easier to identify those fields you've been using for something else all along. Just follow these steps:

1. Open the folder that contains the UNIVERS exes (it is usually called 75c\_exe).
2. Find the configuration file that contains the field whose label you want to change.
3. Open the file with Notepad or similar program.
4. Under the [LABEL] heading, add or modify the label by listing the field number = label. The field number is listed above under [DOCUMENTATION]. Make sure the change is made under LABELS and not to DOCUMENTATION!
5. Save the file and check out your changes!
